Design Notes:

This SDD should be used to mark non-hazardous perpendicular culverts within the clear zone or hazardous perpendicular drainage features or cattle passes installed beyond the clear zone. Review [FDM 11-45.30.6](#). The primary function of the marker post is to spot culvert ends for maintenance and survey personnel. Do not use this to mark driveway culvert ends or underdrain outfall ends.

Review [FDM 11-45-30](#) and [FDM 11-45-30.6](#) for roadside design options for hazardous perpendicular drainage features and cattle pass.
